

# Improve plant health, increase fertilizer efficiency and enhance soil conditions

## STIMULATE™

**STIMULATE™ is a highly successful microbial crop health product that contains dozens of specially selected beneficial microorganisms proven to increase crop growth and yield in large field and research trials.**

- **Stimulate™** microorganisms convert unavailable soil nutrients to available forms, produce useable nitrogen, plant hormones, vitamins, and other substances throughout the growing season and now contain a superior multi-species inoculant system.
- **Stimulate™** is an all-natural biological for use on any crop or plant. It does not contain any genetically modified or pathogenic microorganisms. In contrast, most competitive products are nutritional supplements without any microorganisms that growers need to apply multiple times.
- **Stimulate™** is a highly concentrated formulation designed for application as a seed treatment, in-furrow, banded, or as a broadcast spray on the soil or foliage.
- Let **Stimulate™** be your inoculant! It now contains a genetically superior inoculant system for improved utilization of nitrogen in a broad range of crops.
- Apply **Stimulate™** at 8 to 16 oz/A in-furrow or 2x2 band, 12 to 16 oz/A as a soil broadcast spray, 6 to 8 oz/A as a foliar spray, or 1-8 oz/100 lb as a seed treatment depending on the size of seed.
- **Stimulate™** can substitute for the water carrier in seed treatment mixtures.
- **Stimulate™** can be applied in fertilizer solutions, impregnated on dry fertilizer, and used in tank-mixtures with pesticides.

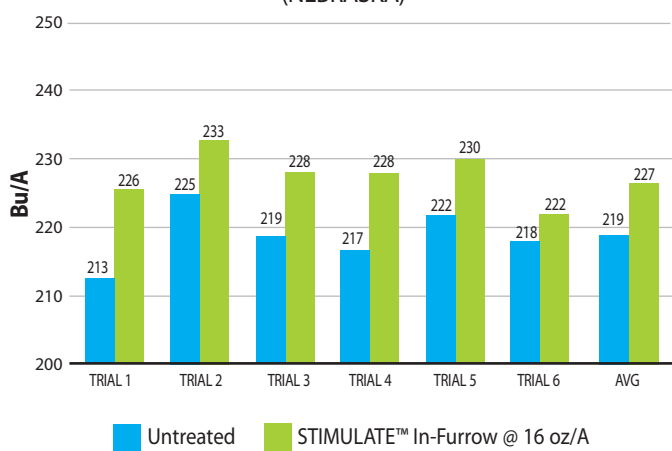

Untreated

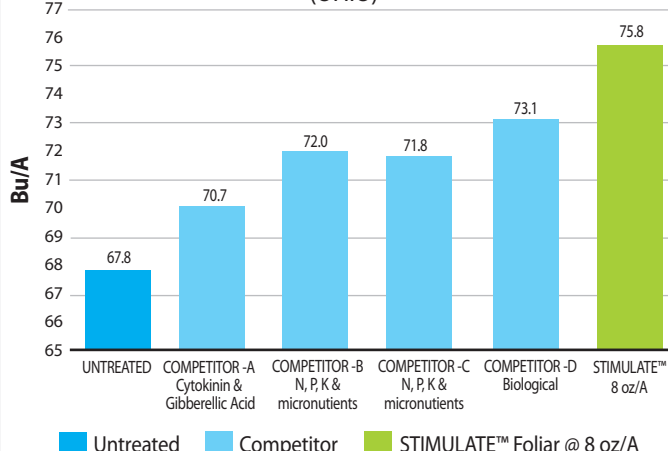

STIMULATE™

## 2018 Stimulate™ Field Trial Results

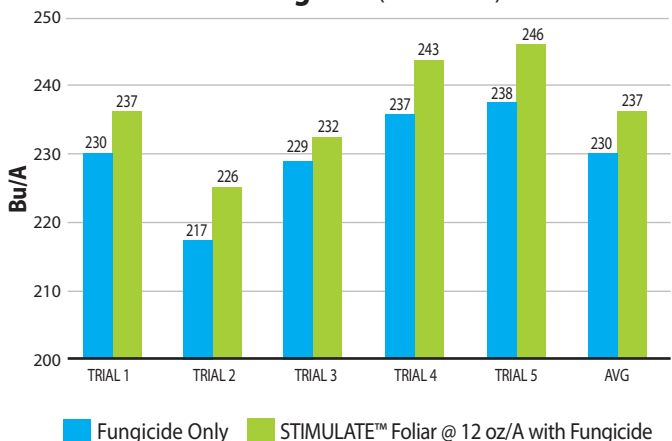

**2018 Independent In-Furrow Corn Trials (NEBRASKA)**

**2018 Independent Foliar Soybean Trial (OHIO)**

**2018 Independent Aerial Foliar Corn Trials with Fungicide (NEBRASKA)**

**2018 Independent Foliar Wheat Trials with Nitrogen Fertilizer (INDIANA & MICHIGAN)**
