

# TRI-PLEX™

## Premium Water Conditioner, Nonionic Surfactant, and Drift Reduction Adjuvant System

**TRI-PLEX™** is an easy-to-use multifunctional adjuvant for use with dicamba, glyphosate, glufosinate, and other pesticides. The all-in-one formulation combines a new non-ammonium, high pH water conditioning technology with a premium high-quality nonionic surfactant (NIS) system and the highly effective **CONTROL WM™** drift reduction adjuvant (DRA).

The **TRI-PLEX™** DRA polymer blend reduces spray drift and increases deposition and retention on the target. This combination also delivers more penetration of the spray into the crop canopy and adds humectancy to allow the droplets to stay in a liquid state longer and increase the amount of time for absorption.

The unique combination of three adjuvants provides rapid mixing and compatibility with most pesticide products. **TRI-PLEX™** increases the performance of glyphosate and other pesticides at rates from 2 to 6 qt/100 gal or 0.5 to 1.5% of the spray volume.

### FEATURES & BENEFITS:

- **TRI-PLEX™** is approved for by BASF for use as a drift reduction adjuvant (DRA) with Engenia® dicamba herbicide.
- **TRI-PLEX™** contains a new non-ammonium, high pH water conditioning system that deactivates hard water ions such as calcium, magnesium, and iron. The higher pH and lack of ammonium reduce the potential for dicamba volatility..
- **TRI-PLEX™** contains a unique and highly effective NIS that enhances uptake and efficacy.
- **TRI-PLEX™** contains the field and lab proven **CONTROL WM™** polymer DRA that increases spray droplet size, mitigates drift, and increases deposition on the target.
- **TRI-PLEX™** increases retention on the leaf surface, usually about two-fold, and reduces evaporation from the spray deposit, allowing more uptake into the plant from a moist deposit.
- **TRI-PLEX™** is compatible with all versions of glyphosate. No need to add ammonium sulfate (AMS).
- **TRI-PLEX™** provides high performance with the convenience of an all-in-one product at an economical price.
