GarrCo products approved by Bayer for use with XtendiMax® dicamba herbicide

- **TRI-PLEX™** is a multifunctional all-in-one adjuvant that combines Control WM™ drift mitigation and deposition polymer with a premium nonionic surfactant system (NIS) and a non-ammonium water-conditioning system approved for use with dicamba. The unique formulation combines a new water-conditioning technology with a high-quality NIS system and the highly effective **CONTROL WM™**. The blend increases deposition and retention on the target, delivers deeper penetration of the spray into the crop canopy, and adds humectancy allowing the droplets to stay in a liquid state longer and increase the time for absorption.

- **CONTROL WM™** is a highly effective and easy-to-use spray drift mitigation and deposition adjuvant that is compatible with all forms of glyphosate.

- **CONTROL DUO™** is a multi-functional adjuvant that combines the **Control WM™** drift mitigation and deposition polymer with a premium NIS system.

**GarrCo Products, Inc.**
Value Consistency Results

GarrCo Products is an independent manufacturer of adjuvants that enhance pesticide performance and biologicals that increase crop production.
