

CONTROL COMBO™

Deposition Aid, Ammonium Sulfate (AMS) and Unique Nonionic Surfactant System

GENERAL INFORMATION

CONTROL COMBO™ is a convenient blend of, real AMS, a superior nonionic surfactant system, and CONTROL™ brand deposition aid/drift mitigation agent, to make a multi-functional all-in-one liquid adjuvant. This easy to use formulation provides a significant amount of AMS with the research and field proven deposition aid/drift mitigation adjuvant CONTROL. Plus, an extra concentrated surfactant system making an all in one multi-functional adjuvant for use with glyphosate and other herbicides requiring AMS and/or a deposition agent.

CONTROL COMBO contains real AMS.

CONTROL COMBO includes a high performance surfactant system.

CONTROL COMBO also contains the research and field proven CONTROL polymer blend that reduces drift and increases deposition. This allows more of the active pesticide to reach and be retained on the target, while providing a significant reduction in evaporation allowing enhanced uptake. **CONTROL COMBO** has shown to enhance the spray solution providing pattern uniformity and a better droplet size that enhances deposition and canopy penetration.

CONTROL COMBO is recommended to be used at 1 gal/100 gal. DO NOT use with "Max" versions of Monsanto branded Roundup®.

CONTROL COMBO has shown to be useful at assisting with tank mixture compatibility.

INGREDIENTS

Ammonium sulfate, nonionic surfactant system, **CONTROL** polymer blend and formulation aids 100%.
